

rescue-tec B.A. Control Board atur-x, battery-version, three teams, crosswise

Order number: AS-01020

The electronic breathing apparatus control board (BACB) atur-X is custom-built for an independent breathing protection monitoring for three teams.

atur-X is convenient to handle and easy to read. Thus, it helps to keep monitoring as safely as possible. Thanks to its low weight, the BA control board atur-X ensures monitoring without getting tired. It offers a good overview with the lighted LCD display. All relevant information can be read at once. It is also possible to easily change the operating time (20, 30 or 60 minutes) per team.

For quick navigation, the current status of the active team is displayed in the form of three LEDs which are arranged like a traffic light. An acoustic warning signal sounds after each third of the duration of operation. There are nine holes for tallies on the right (substitute team) and underside (operation team). At the top of the board a shoulder strap can be attached (AS-01140, not included).

- electronic-acoustical signal
- lighted LCD display with status LEDs
- indication of battery level in display
- ring binder mechanism for writing pad
- two pen holders
- nine holes for tallies each side - on the right and underneath
- mounting option for LED lamp
- rugged metal housing
- three batteries (Mignon) included
- can also be operated with rechargeable batteries (not included)

dimensions: 390 x 345 x 65 mm

standby current consumption: approx. 0.050 mA

weight: 1.2 kg
