

rescue-tec Rapid Intervention Team Bag RIT-Bag

Order number: AS-05026

This bag is used for individual breathing air cylinders (6-9 l) with a directly connected pressure reducer and a long medium pressure line + regulator.

Where there is zero visibility, certain designs allow the Rautek pocket to be opened and the belt sling + bag banding in it can be guided around the casualty. The rapid intervention bag is laid on the patient and additionally fixed with the leg strap (multifunctional shoulder carrying belts). This allows the middle pressure line to be relieved from strain and transportation takes place via the casualty without the need for further people for carrying the bag. (without contents)

material: cordura 1000D

dimensions: 28 x 32 x 85 cm

weight: 2.81 kg
