

## Quick Recovery System SRS, (without outside pocket)

**Order number:** AS-80200

The quick recovery system is a newly designed, innovative rescue system for rapid intervention teams (RIT). Developed in cooperation with fire and rescue services!

Two years of testing in action helped to design a lightweight and compact system which fits the high requirements of RIT.

All in One! A complete breathing apparatus or a RIT-bag can be integrated and secured easily. Once unpacked the quick recovery system is immediately ready for use with no additional preparation necessary, thanks to the quick release mechanism. This mechanism can also be used to fix the RIT-bag to the system during rescue operations. Only one belt is necessary to fix an injured person.

The system is made of a reinforced synthetic material and can be carried or slid. This will protect the injured and his breathing apparatus.

It is also possible to refit older ASA systems with quick recovery system components.

dimensions inclusive RIT-Bag: 113 x 30 x 35 cm  
weight only SRS: 4.7 kg
