

Smoke Hose for Cumulus und Stratus, length: 10 m, diameter: 152 mm

Order number: AU-01136

A smoke hose is mainly used when the smoke machine needs to be positioned some way from the staging. Perhaps because water needs to be used during an exercise. A smoke hose is also ideal for simulating leaks, transporting smoke to an explosion-proof environment, or for connecting a smoke machine to piping.

The outside of the smoke hose is equipped with wear strips, which ensure the hose is very resistant to being dragged along the ground, as well as heavy applications. Cuffs have been applied to both ends of the hose. These cuffs make sure the hose can easily be secured to piping, for example. The three attachment loops and the integrated straps can be used to fix the hose.

Supplied with:
adapter for the FireSales Cumulus/Stratus
transport box

length: 10 m
diameter: 152 mm
