

## FireSales Smoke Hose Set, for Cumulus and Stratus

**Order number:** AU-01137

The Smoke Hose Set is a box with an adapter for the FireWare Cumulus/Stratus and a smoke hose with a diameter of 152 mm. Thanks to the large circumference and the metal ring frame, a decent amount of smoke can be transported through the hose.

A smoke hose is mainly used when the smoke machine has to be placed further away from the production. For example, because water is needed during a drill. A smoke hose is also ideal for simulating leaks, transporting smoke into an explosion-proof environment, or connecting a smoke machine to a pipe system.

- Perforated
- Wear strips on the outside for heavy duty applications
- Cuffs for connection to pipes
- 3 mounting loops and built-in tension straps

Included in delivery:

1x adapter for Cumulus/Stratus

1x plastic box 60 x 40 x 32.5 cm

Dimensions: 10 meters length and 152 mm circumference
