

FireSales Black Smoke Blinding Mask

Order number: AU-01866

The realistic blind mask for firefighters and plant security personnel.

This blind mask is a practical tool for firefighters. Especially in situations where the use of training smoke is not desirable.

The Black Smoke Blinding Mask from FireWare restricts the visual perception of the trainee. The mask can be worn over the head or over a breathing mask. Blinding masks have been around for a while. But the uniqueness of this particular blind mask is that it simulates a deep dark layer of smoke, but through which the glow of an ember can still be seen. Ideal for breathing exercises!

- Mask designed to restrict vision
- simulates a deep dark layer of smoke through which the glow of an ember still remains visible
- for training situations where smoke cannot be used
- fits all major brands of respirators, can also be tied directly around the head
- easy to clean, resistant to disinfectants and detergents
