

FireSales Smoke Simulation Mask Nebula AR, MINI-Set

Order number: AU-01880

It is not always possible to generate smoke in an exercise or it is undesirable because of the premises. With the electronic smoke simulation mask, six different smoke densities can be simulated by pressing a button. For this purpose, the glasses are equipped with an LCD display. In random mode, even an irregular smoke density pattern can be generated.

The instructor can use the remote control to control up to four groups of masks. Each group can consist of an unlimited number of masks. With the panic button, the wearer immediately has a clear view again.

The glasses can be worn directly on the face or over a respirator. The entire electronics are hidden in the mask housing.

- smoke simulation without fog machine
- six different smoke densities and random mode
- panic button
- controllable by remote control

supplied with:

remote control

2 electronic blind masks

charging station with three charging cables

operation manual

plastic transport box
