

Ruth Lee Training Dummy Working at Height, adult, weight 50 kg, size 1.80 m

Order number: AU-02075

An extremely tough manikin for Working at Height training in many industries: Wind Turbines, Telecommunications, Stage and Theatre, Scaffolding, Police & Military, Maritime, Factories & Industry, Fire & Rescue, Cleaning and Maintenance, Construction, Pole Top and Tower Rescues. (helmet and rescue belt are not included)

- similar in construction to the Duty Range manikins but utilises closed cell foam to the trunk to provide greater rigidity and reduce 'slumping' when using a rescue harness
- tough Polypropylene plastic strips running from the shoulders to the knees (as in the Offshore model) prevents excessive flexing when used aloft
- anatomically correct weight distribution gives the 'feel' of an unconscious person - perfect for pole top or tower rescues
- realistic sizes and weights - will demonstrate the difficulties of dealing with an adult unconscious casualty
- strong Polypropylene webbing loop to the back allows the manikin to be easily hauled into position prior to training
- strong enough to be dropped from 2 or 3 storeys with no damage
- the Polyester is waterproof, making it suitable for training in wet or dry conditions as it can be easily cleaned and dried
- soft body joints eliminate the risk of pinch welts and bruising, a common injury when using plastic bodied manikins.

supplied with:
protective overall
boots

size: 1.80 m
weight: 50 kg
