

Ruth Lee Training Dummy for CPR torso, without torso, weight 50 kg, size 1.80 m

Order number: AU-02084

Ruth Lee has recently designed a full bodied CPR manikin for using in or out of the classroom. The manikin will allow for realistic CPR training in more difficult situations i.e confined spaces or with the manikin trapped under a vehicle or collapsed building etc.

It will accomodate most other manufacturers models if you already have one. The torso won't be fixed in any way and can simply be lifted out for cleaning or maintenance. The chest cavity of the manikin is also padded all round to protect the torso when used in difficult situations. (without CPR torso)

supplied with:
protective overall
boots
storage bag

size: 1.80 m
weight: 43 kg
