

## Ruth Lee Rescue Manikin Confined Space, adult, weight 50 kg, size 1.80 m

**Order number:** AU-02099

The perfect training partner for operational exercises in a confined space or in other hard-to-reach places. This manikin disassembles into several parts, making it easy to transport and set up once in position.

Training in confined spaces comes with its own set of challenges - if you need to place a manikin in such a training scenario, this manikin is an ideal choice and is suitable for any confined space such as a shaft rescue, traffic accident, or mountain and cave rescue scenario.

The detachable limbs make it even easier to position the doll. None of the individual components weighs more than 25 kg. The anatomically correct weight distribution simulates an unconscious victim. A strong webbing loop on the back allows for easy handling, lifting, storage and hanging to dry.

The manikin is tough enough to be buried under concrete or steel supports, run over by a vehicle, or dropped from a 2nd floor window (approx. 4 meters) without damage.

The water-repellent material is also suitable for wet or dirty scenarios. Soft body joints reduce the risk of bruising. Comes complete with boots that can be easily replaced if damaged.

- detachable limbs for placement in confined space
- component weight less than 25 kg
- anatomically correct weight distribution
- soft joints to avoid bruises

supplied with:  
boots

size: 1.80 m  
weight: 50 kg
