

FireSalesSilver Fire Manikin made of Kevlar/Silcon, weight: 9 kg, size: 1.90 m

Order number: AU-02305

With the Silver Fire Manikin you can simulate a burning person. This way students will learn how to put out flames with a fire blanket. The techniques for extinguishing a standing person can be practiced by using a standard.

The Silver Fire Manikin is manufactured from silicone cloth and strengthened with Kevlar at the crotch, the armpits and the ends of the arms and legs. One tabbard for the upper body is included. It is advisable to light the fire on this vest because it will considerably extend the life span of the manikin. The tabbard is easy to replace and has a higher heat resistance than the manikin but is not water repellent.

The best way to inflame the manikin is with the FireSales low smoke fire gel or the low smoke fire paste. The silver fire manikin is not suitable to be used as a rescue dummy.
