

FireSales Shoutbox for rescue dummies

Order number: AU-02350

Enable the dummy "to call for help" with the ShoutBox.

A pre-recorded message of maximum 60 seconds is played back. This can be done by adjusting the time interval or by using the Vox function. In that case the ShoutBox will react to the sound of a voice. Place the ShoutBox in the exercise room or place it behind a victim dummy. When the students call: "Is anyone there?" the ShoutBox will react to the sound and play the pre-recorded sound. As a result a realistic interaction is created between the emergency officer and the victim.

- provides a dummy with the power of speech
- play back appliance for recorded sounds
- reacts to sound, as a result of which interaction is created

supplied with:
2 AA batteries
