

Ruth Lee Training Dummy Leg Protector, for adult dummies till 70 kg

Order number: AU-02360

These leg protectors greatly protect the manikins when being dragged - particularly during fire-fighter induction trials. Constructed using tough, heavy duty nylon but now with a disposable Polypropylene plastic strip. The plastic strip is simply held in place with 4 press studs and will last for many exercises before needing to be replaced. The plastic strips are also available as a spare part in a pack of 5 (AU-02360-E1).

The leg protectors include a harness and two 'dragging' loops, they also include two loops to hold the manikins arms in place to prevent them dragging on the ground; polypropylene webbing and quick release buckles quickly and easily secure the leg protectors to the dummy.

dimensions: 1005 mm x Ø 580 mm
