

## Ruth Lee Training Dummy Dog, weight 10 kg

**Order number:** AU-02365

It's not just people who need rescuing! Sometimes our four-legged friends get into trouble too, whether walking on cliff top beauty spots, out on river estuaries or even just in the local park.

It's human nature to try and help our pets and many people get into trouble trying to rescue their dog - therefore it's vital that the fire and rescue service and other search and rescue teams consider canine rescues as part of their regular training.

Our dog manikins are perfect for training with other teams and even multi-agency exercises involving helicopters (air rescue), the Coastguard and Mountain Rescue organisations. They are constructed in waterproof Polyester, a material which typically has 4 times the strength and abrasion resistance of canvas or P.V.C - making our dog manikin very strong and durable.

- constructed of the same flame retardant Polyester (conforms to BS EN ISO 15025:2002, OEKO-TEX Standard 100 and ISO 17050-1) used in Police ballistic/stab vests - our canine manikins are tough
- made from waterproof material, this means they can be easily cleaned and dried
- designed to provide anatomically correct weight distribution
- soft body joints eliminate the risk of pinch welts and bruising; common injuries when using plastic bodied manikins
- tough enough to bury under rubble and rockfall, drive over with a vehicle or drop from 2nd-floor window with no damage

material: Polyester

weight: 10 kg

colour: black
