

## Prestan Training Dummy Set, with display function

**Order number:** AU-02581

Prestan Collection - all excellent Prestan CPR practice manikins in an attractive set.

The training manikins have a built-in control indicator for pressure depth and compression rate. The correct pressure depth is confirmed by a clicking sound, the compression rate by a multicolored light indicator. At a compression rate of less than 60 compressions per minute, a red indicator light is illuminated, above which the color changes to orange. Above 80 compressions, a green indicator lights up, and once 100 compressions per minute are reached, two green indicators light up. If the user slows down the compressions, the colors change in reverse order. If the depth of the compressions is not sufficient, all indicators go out and a red light starts flashing.

- maintenance free
- easy to clean
- comply with current ERC, AHA and ARC guidelines
