

## Suction Training Model, incl. artificial sputum and transport bag

**Order number:** AU-02590

With this model in life size nasal and oral suctioning techniques can be practiced. The model has a tracheal opening for tube insertion and intrabronchial suction training. The left side of the face can be removed to control tube position. The model comes with artificial sputum which can be removed realistically. Additionally the model has an oesophagus and allows placement of gastric feeding probes. The model is also very good for teaching the anatomy.

supplied with:  
transport bag  
artificial sputum

weight: 3.1 kg
