

FireSales Extinguishing Trainer BF Hybrid

Order number: AU-03250

The BF Hybrid can be used to simulate a fire for practicing several techniques of extinguishing. A unique feature about the BF Hybrid is that it can be used with, as well as without water. The flames are wide and dynamic when water is used, but without the water the fire is also complete, thanks to the unique perforated stainless steel bottom plate.

Students can extinguish using CO₂, foam or water. The flames will vanish when the instructor stops the gas flow with the handle on the gas hose. Foam that remains can easily be drained through the holes in the side of the extinguishing trainer. The BF Hybrid is suitable for different kinds of gas, like propane, lpg and butane, as long as it goes into the extinguishing trainer in the form of gas. The construction is made of strong aluminum sides and the enclosure is made completely out of tread plate. The BF Hybrid can be set up by one person and is operational within minutes. Just connect the gas hose, squeeze the handle and ignite the extinguishing trainer with the special distiller (excluded). As long as the instructor squeezes the handle, the fire will keep on burning.

supplied with:
gas hose, 6 m length
pressure reducer
check valve
on-/off-switch

dimensions: 80 x 60 x 15 cm
water volume: 10-15 l
weight: 19 kg
