

## FireSales Flange Fire, Add-on for extinguishing trainer Vesta

**Order number:** AU-03259

The add-on flange fire is an accessory for the FireSales Vesta. The flange fire is an active attachment. This means it can be attached to the Vesta's extra exit. Ignition will subsequently take place via the Vesta by directing the gas outflow towards the burning Vesta. The add-on flange fire offers challenging OGS training. Closing the gas tap will shut off the gas supply and the exercise has been a success! (without extinguishing trainer Vesta)
