

FireSales Heat-Pack, package with 12 pieces (re-useable)

Order number: AU-05115

The heat packs can be used in the thermal tabbard for training dummies. The heat is distributed in the vest, so it generates a realistic effect. The packs are visible when a thermal imaging camera is used in an exercise.

A heat pack is given a temperature of approx. 40 °C. This heat is retained over a long period. After use it is possible to recharge the heat packs by playcing them in boiling water. This turns them to their original state and thex can be used again.
