

FireSales Colour Fluid, 500 ml

Order number: AU-06110

With the FireSales Colour Fluids it is easy to colorize water to appear chemical. A few drops in a large barrel of water are enough to give the water a saturated color. If desired, the different colours can also be mixed with each other in order to achieve the desired result.

Depending on the colour intensity 1 ml colour fluid lasts for 10 l water. The mixing ratio is 1:10.000.

Use the colour fluid sparingly and avoid contact with skin, clothing or the environment to prevent spotting.

contents: 500 ml concentrate

colours: black, blue, yellow, green, red and white
