

## FireSales Soundbox V3 for Training, with Smartphone control

**Order number:** AU-07128

Burning sounds and sparks, a barking dog, sobbing people or a crying baby. These are just some of the sounds that can be simulated with the FireWare SoundBox V3. This sound box is supplied with a license to use the more than 45 built-in FireWare sound effects especially for the staging. Confront students with a collapse right behind them or an explosion somewhere in the building. Do they respond appropriately to the sound of a liquid or gas leak? Practice very varied and challenging scenarios with this loudspeaker!

The SoundBox V3 is IP65 water-resistant and very robust. This makes it the ultimate exercise tool for adding sound effects to exercises that involve working with water. The loudspeaker is completely sealed and the controls and the screen are protected with a cover.

With the special FireWare software, operating the SoundBox V3 is child's play. Thanks to the advanced menu structure and the clear screen, the right sound is found in no time at all. It is even possible to arrange sounds in a special order with the help of a playlist. First an explosion and then the fire!

Is your sound not included? Then you can even stream your own sounds directly to the SoundBox via your smartphone!

- IP65 waterproof
- 45 programmed sound effects
- your own sounds can be imported via your smartphone
- operation via the app or on the device itself
- several SoundBoxes V3 can be placed in a WLAN
