

FireSales Electronic Explosion Simulator, volume 120 dB

Order number: AU-07135

Simulate with the electronic explosion simulator the sound of an explosion to as much as 120 decibels in a legally acceptable way. It is possible to simulate an explosion at the push of a button.

The blast interval is regulated electronically using a built-in timer. Control the volume by sliding the barrel in or out. The sound effect is impressive and vibrates the area ... The equipment is therefore not suitable for interior use. The Explosion Simulator has a regulator valve and works on a normal propane bottle, which is not provided.

supplied with:
battery
charger
remote control
