

Optimus Multifuel Expedition Stove Nova

Order number: CA-01021

The lightweight, compact Nova can be used anywhere - in the high mountains as well as at the campsite. With only one nozzle, it sets the standard for modern multifuel expedition stoves.

It is also equipped with a patented, fast-igniting burner. The aluminum pump with venting function automatically reduces the pressure in the fuel bottle when the stove is turned off. Precise control of the flame means the stove can be left unattended for some time, even when setting up camp. And when you're really far out away from civilization, the Multifuel option provides reliable flexibility in fuel choice so you never have to crawl into your sleeping bag without a hot meal.

- legendary multifuel expedition stove
- precise and instant flame control
- integrated MAGICTM cleaning needle for quick and easy nozzle cleaning
- durable aluminum pump and quick connectors for added safety and ease of use
- patented fast ignition burner shortens preheating time and reduces fuel consumption
- one nozzle for safe use of different fuels
- windshield for increased performance
- retractable pot support and foldable flame regulator
- despite its small size, the Optimus Nova offers the necessary stability even with large pots

delivery without fuel
