

S-GARD integrated rescue and restraint sling, EN 358, EN 1498-A, width 8 cm

Order number: EB-03295

IRS (Integrated rescue and restraint sling) brings more safety to everyday operations. The rescue sling and attachment gear is stored in the designated pocket of your protective clothing and is therefore ready for use in just a few seconds. Simply open the storage pocket to pull out the restraint sling. This system first of all provides quick self-securing by holding the worker where there is the risk of falling in everyday operations in ad hoc situations like e.g. on slopes with the danger of slipping or on turntable ladders.

Secondly, during emergencies in an inside attack, it provides the possibility of abseiling from rooms one can retreat from or as a strap used by the security squad in a rescue action.

In the jacket models TITAN and SWISSGUARD the DTS system is included.

Upon request, the DTS system is available for jacket models: TITAN, HUNTER, SWISSGUARD, HERO.

width: 8 cm
