

Plaster Dispenser for Children, filled with 115 different plasters

Order number: EH-05185

The plaster dispenser is filled with plasters in special sizes for children. The aluderm-aluplast plasters have an aluminum wound layer and a further layer. The aluminized wound layer glides wound discharges into the absorptive middle layer so the wound remains dry and clean.

Each plaster variety is stored independently in its own compartment, which avoids confusion and gives a clear product overview for the user.
