

Bee-Patch plaster for stings of bees and wasps, 5 pcs.

Order number: EH-05270

Bee-Patch is a patch used to treat bee and wasp stings.

If you are stung, you pull out the stinger, put a drop of water on the sting and stick the patch on it. Within an hour, the venom is extracted from the skin, significantly relieving pain and swelling.

Bee-Patch is based on an old Danish home remedy where a drop of water is placed on the sting with a sugar cube. This draws the venom out of the skin by osmosis. However, in Bee-Patch, the sugar is sealed in the patch with no odor and therefore does not attract additional insects.

Bee-Patch contains no chemical ingredients and is also suitable for diabetics.
