

rescue-tec Fire Brigade Multi Purpose Bag Hochheim, acc. to DIN 14922, with individual text

Order number: HO-06217I

For 30 m rescue rope or up to 100 m guide rope.

A combination of a rope pouch and respiratory equipment holster. Equipment such as a rescue knife, scissors Cologne, a belt sling with a carabiner, a timber wedge as well as a marking pencil (in additional slots) are quickly available in the front compartment.

Even with zero visibility, things are close at hand! The rope can be fastened on the inside of the pouch with a carabiner. The opening, which can be shut tight, makes it possible to prevent the rope running out in an uncontrolled way.

With the flame-resistant strap with metal carabiners (HO-06220) the bag is carried over the shoulder. The integrated emergency release appliance, which releases at a force of 250-300 N, minimises the risk of getting stuck. (shoulder strap not included)

- flame resistant material, tested in a 6-burner test at 950 (\pm 50 °C) like respiratory protection full-face masks class 3
- emergency release appliance
- the mobility of the wearer is not inadmissibly restricted
- the physical burden on the wearer is not increased disproportionately
- the protective function of other PPE is not endangered

This bag comes with its own labeling request. The front under the reflective stripe offers space (14 x 2 cm) for the vehicle name or the name of the district or both.
