

EDELRID DEFUSER RESCUE L, compact drop damper for FUSE

Order number: HR-03004

The specially developed DEFUSER RESCUE L absorber only be used with the FUSE fall arrester.

It is light, compact and the maximum impact force is 30% below the standard.

- for work with heavy loads as well as rescue situations with transfer of a helpless person into the own system
- loads up to 220 kg

Length: 400 mm

With EDELRID FUSE (HR-03007) = EN 12841-A, + Fuse = 353-2, + Fuse = ANSI Z359.15

The long, narrow shock absorber for user loads of up to 220 kg reduces the impact force generated by a fall. The high load capacity enables users to work with heavy equipment and offers an additional reserve for rescue situations where users need to bear the weight of the person in need of assistance on their own system. The elongated design allows a slightly greater distance from the belay rope and therefore a clear working area. The window makes it possible to visually check the intactness of the energy absorber at any time.
