

## PETZL ROLLER COASTER Rope Protector, on bearings for a moving rope

**Order number:** HR-13011

The ROLLER COASTER protector is designed to help protect a moving rope from abrasion. Reversible, with different frame shapes on either side that allow it to adapt to flat or angled surfaces. Multiple connection holes allow the use of different attachment methods. It's possible to connect multiple modules to better adapt to different types of terrain.

- flat face with attachment points, making it possible to position the module on a flat area or soft ground
- angled face makes it possible to install the module on an I-beam, square edge, or guardrail
- Rollers mounted on sealed ball bearing, providing high-efficiency
- multiple connection holes make it possible to use the most suitable mounting option for the terrain: 10 or 12 mm bolts, PULSE, COEUR PULSE
- multiple modules can be assembled together with links, carabiners, or even cord
- Protection for one or two moving ropes

material(s): Steel, aluminum

weight: 470 g
