

## rescue-tec Rope Bag Bielefeld, Volume 50 I, for 150 m Rope

**Order number:** HR-17060

The rope backpack is made of very strong and sturdy tarpaulin fabric and protects the contents reliably. With the large base, the rope backpack can be placed in an upright position and the large opening makes loading and unloading of the equipment very easy.

The ventilation grids on both sides serve for faster rope drying already at the point of use. Through the side eyelet, the rope end can be led outside. The fixation is done by a cover with magnetic closure. This allows quick control of the rope end before using.

It's possible to attach a webbing strap inside the bag for the safety transport of carabiners, descender and tubular loops. The strap can be easily removed with the key lock and placed elsewhere.

Two carrying handles on the top are placed for transport, but can also be used for hanging the rope bag in a rope or sling. This allowed an additionally secure and an easy transport in narrow structure.

The padded shoulder straps allow the use of the rope bag as a backpack even on longer climbs.

The address window outside makes it possible to view the contents list without opening.
