

rescue-tec Rope Pouch Burladingen w. Hook for b.a., and compartment for Fire Escape Hood

Order number: ID-121

Version of the rope pouch with hook for b.a. (HO-01215) developed for the fire brigade Burladingen for 30 m rescue rope (DIN 14920) or up to 100 m guide rope and compartment for fire escape hood.

The rope pouch for capturing fragments can be fastened to nearly every breathing apparatus. It is hooked with one hook to the top retention belt of the breathing air cylinder and fastened using a rubber band over the cylinder valve. The pouch can be hooked off using a handle (pulled upwards) and removed.

The rope can be fastened on the inside of the pouch with a carabiner. This way, when using this as a means to secure a return route, a secure connection is assured. The escape opening on the underside, which can be shut tight, makes it possible to prevent the rope running out in an uncontrolled way.

The red compartment on the top offers space for a fire escape hood (without outer packaging).
(without content)

In addition, the rope pouch was finished with the fire brigade's logo.

material: Cordura 1000D
dimensions: 52 cm x Ø 14 cm
weight: 0.38 kg
