

rescue-tec Rope Pouch Bruchsal, with Hook for b.a., and compartment for door marking equipment and more

Order number: ID-130

Version of the rope pouch with hook for b.a. (HO-01215) developed with the fire brigade Bruchsal for 30 m rescue rope (DIN 14920) or up to 100 m guide rope, door marking equipment and more.

This rope pouch for capturing fragments can be fastened to nearly every breathing apparatus. It is hooked with one hook to the top retention belt of the breathing air cylinder and fastened using a rubber band over the cylinder valve. The pouch can be hooked off using a handle (pulled upwards) and removed. Alternatively, the rope pouch can also be carried over the shoulder with the securely sewn shoulder strap. When not in use, the shoulder strap is stowed behind a flap with Velcro.

The rope can be fastened on the inside of the pouch with a carabiner. This way, when using this as a means to secure a return route, a secure connection is assured. The escape opening on the underside, which can be shut tight, makes it possible to prevent the rope running out in an uncontrolled way. In the rope pouch, which is 2-3 cm longer, the rescue rope is not stuffed but stowed wrapped.

The compartment on the top offers space for five ribbon for marking doors with stopper. There is space for two 3D wooden wedges, an marking pen and an HMS carabiner in the compartment with subdivision on the side. (without content)
