

rescue-tec Rope Pouch Bad Homburg, and compartment for Fire Escape Hood

Order number: ID-158

Version of the rope pouch Dorsten (HO-01218) developed with the fire brigade Bad Homburg for 30 m rescue rope (DIN 14920) or up to 100 m guide rope, fire escape hood and more.

This rope pouch for capturing fragments can be fastened to nearly every breathing apparatus. It is hooked with one hook to the top retention belt of the breathing air cylinder and fastened using a rubber band over the cylinder valve. The pouch can be hooked off using a handle (pulled upwards) and removed. Alternatively, the rope pouch can also be carried over the shoulder with the securely sewn shoulder strap. When not in use, the shoulder strap is stowed behind a flap with Velcro.

The rope can be fastened on the inside of the pouch with a carabiner. This way, when using this as a means to secure a return route, a secure connection is assured. The escape opening on the underside, which can be shut tight, makes it possible to prevent the rope running out in an uncontrolled way. In the rope pouch, which is 2-3 cm longer, the rescue rope is not stuffed but stowed wrapped.

The compartment on the top offers space for a fire escape hood (without outer packaging). There is space for two 3D wooden wedges, a tubular loop (180 cm) with HMS carabiner and five ribbon for marking doors in the outside compartments. They are easy and safe to reach for the respirator wearer, even when visibility is zero, and are protected by the precisely fitting, tightly fitting cover flap. (without content)

material: Nomex, red
dimensions: 52 cm x Ø 18 cm
weight: 0.37 kg
