

rescue-tec Holster for Radiation Dosimeter, fixation at b.a. shoulder belt

Order number: ID-173

The Holster was developed together with an international research centre to storage the Thermo Scientific Electronic Personal Dosimeter (EPD) MK2+ and a film dosimeter.

The dosimeter EPD in the main compartment can be read by the transparent lid patent. The control button can also be operated with gloves. The film dosimeter finds space in the attached front pocket, which is closed with the lid of the main compartment. The three-sided padding protects both dosimeter from damage.

With the elastic Velcro the holster can be flexibly attached to different width and strong shoulder straps. For individual marking, a round Velcro is sewn on the front pocket.

material: Cordura 1100dtex yellow

dimensions: 10 x 7.5 x 6 cm
