

rescue-tec Quick Response Bag Marburg, Tarpaulin, red

Order number: ID-23

Version of the Quick Response Bag de Vries (LT-01200) developed with the Marburg Fire Brigade without a front bag, with a simple hose / nozzle attachment, made of red tarpaulin.

In 2008, the Marburg fire brigade requested a quick response bag for 30 m of D32 hose. The following factors were required: structure similar to the De Vries quick response bag but suitable for larger hoses, easy cleaning, deviation from the color black and the attachment of the jet pipe and D-coupling with Velcro.

A adapter Storz C/D with loops made of velcro and fleece can be attached to the front. A nozzle with an output of 100 to 150 l/min (6 bar) offers an effective extinguishing effect, but also effective man protection and a full spray jet. (without content)

material: tarpaulin, red

dimensions: 49 x 51 x 6 cm

weightt: 1.2 kg
