

rescue-tec Rapid Intervention Team Bag, model Kassel, tarpaulin black

Order number: ID-3

Version of the Rapid Intervention Team Bag RIT-Bag (AS-05026) developed with the Fire Department Kassel.

Easiest way to transport reserve breathing air cylinders through the safety team. In the bag, 6 litres of breathing air cylinders, with directly connected pressure reducer and long medium pressure line + automatic regulator can be carried. (We recommend using bottles with a valve with drain protection.)

In addition to the lateral fixation for automatic lungs and pressure reducers by Velcro, a slot is provided to accommodate an escape hood (e.g. MSA AUER RespiHood, AS-80110) in the front part of the bag.

In the security squad bag, the most important thing for an emergency has been safely protected.

The bag is also easily visible in the fire smoke due to the reflective strip and with the double zip handle even with gloves to open quickly and easily.

The rapid intervention team bag Kassel convinces with its compact dimensions, easy handling and is a real lightweight of only 700 grams.

The system is transported by shoulder straps (AS-01140, not included), which is mounted on two eyelets designed for this purpose. Or on the sturdy handle on the top of the bag. (excluding content)

material: tarpaulin black

dimensions: 68 x 16 x 30 cm

weight: 0.7 kg
