

rescue-tec Rope Pouch Alzenau, up to 100 m rope, with Hook for b.a.

Order number: ID-35

Version of the rope pouch with b.a.-fixing (HO-01215) developed with the fire department Alzenau with shelves for additional equipment and fixing for the timber holding device.

This rope pouch for capturing fragments can be fastened to nearly every breathing apparatus. It is hooked with one hook to the top retention belt of the breathing air cylinder and fastened using a rubber band over the cylinder valve. The pouch can be hooked off using a handle (pulled upwards) and removed.

The rope can be fastened on the inside of the pouch with a carabiner. This way, when using this as a means to secure a return route, a secure connection is assured. The escape opening on the underside, which can be shut tight, makes it possible to prevent the rope running out in an uncontrolled way.

The rope pouch also has additional shelves for tubular loop and HMS-carabiner, two 3D timber wedges and for marks and a rescue knife. In addition the timber holding device of the rope should be fixed on the outside of the pouch. On this version we did not use any reflex material.

material: Cordura 1000D, black

dimension: 50 cm x diameter 14 cm, with shelves 17 cm
