

rescue-tec Material und Equipment Backpack Vienna, for protective equipment against falls

Order number: ID-52

The oldest professional fire brigade in the world, the city of Vienna, asked us to have the door opening backpack (TA-02400) printed with their logo for storage and transport of the fall protection. The complex, multicolored logo is printed on foil and patched. The space freed up by doing without the inner pockets is used to hold the rope.

Due to the division into different compartments, all parts of the fall protection can be quickly overlooked and specifically removed. All compartments can also be opened with gloves.

The inside unit made of ABS plastic gives necessary stability to the backpack and protects the contents. The backpack exterior features robust Cordura, and the interior is made of easy-to clean PVC-coated fabrics.

The sophisticated suspension system allows the carrying as a backpack, as well as use as a pocket. The shoulder straps are stowed in a compartment, so a comfortable accommodation in a standard compartment of the vehicle.

It is possible to store operating instructions, parts lists and similar in the top pocket so they are close at hand.

On the front side, a fleece strip is attached for a reflective shield (300 x 50 mm) which allows individual identification. (without contents and without inside module)

material outside: cordura 1000D

material inside: pvc coated

dimensions: 56 x 37 x 21 cm
