

rescue-tec Bag Aviation Oxygen Systems, for oxygen supply in cargo aircraft

Order number: ID-54

The transport bag is designed for the emergency oxygen supply of cabin crews on cargo aircraft.

Live cargo, such as racing horses, is checked and supplied at regular intervals by a flight attendant. In order to have oxygen during a pressure drop, it is obligatory to carry an oxygen bottle with breathing air mask.

The following features were also important for the transport bag:

- An aluminium body protects against shocks and falls
- The bag is additionally padded
- Fast control in the context of flight checking through meaningful detailed solutions
- The pressure of the breathing air bottle can be read from the outside
- The pocket opening can be sealed
- The seals of the bottle and mask are easy to read from the outside
- The bag is labeled with OXYGEN, loading direction (arrow and UP) as well as the inventory/part number

material: flame retardand

dimensions: 23 x 79 x 17 cm

weight: 3.99 kg
