

rescue-tec Rope Pouch with Hook for b.a., side compartment for fire rescue hood

Order number: ID-95

For 30 m rescue rope (DIN 14920) or up to 100 m guide rope.

This rope pouch was developed after the fair Interschutz 2015 with various fire brigades. The rope pouch for capturing fragments can be fastened to nearly every breathing apparatus. It is hooked with one hook to the top retention belt of the breathing air cylinder and fastened using a rubber band over the cylinder valve. The pouch can be hooked off using a handle (pulled upwards) and removed.

The rope can be fastened on the inside of the pouch with a carabiner. This way, when using this as a means to secure a return route, a secure connection is assured. The escape opening on the underside, which can be shut tight, makes it possible to prevent the rope running out in an uncontrolled way.

On the side of the rope pouch there is a compartment for a fire escape hood. The position of the additional compartment is chosen so that it does not interfere with the attachment to the PA. (without contents).

material: cordura

dimensions: 40 x 14 x 21 cm
