

## Wetting Agent FIRE-EX TURBO 1000, pack of twenty

**Order number:** LT-01058

Refillable FIRE-EX TURBO 1000 cartridge insert for fire class A, for reducing the surface tension of the extinguishing water, inserted directly into the inlet of an AWG Turbo nozzle for more effective firefighting! The simplest way to wet 1000 l of extinguishing water, regardless of the flow rate.

The FIRE-EX TURBO 1000 plug-in cartridge comprises a reusable wetting agent holder and a wetting agent capsule. They are inserted into the inlet of a Turbo nozzle and coupled to the hose. Then the system is immediately ready for use.

Can be used with standard Turbo nozzles with inlets based on G2 male thread, sizes 2 and 3:

T2235, T2400, T2475, T2500, T2750, T2950 and the TURBOTWIST complete system.

If the wetting agent cartridge has been expended, this can generally be easily recognised in the extinguishing water, as only clear water comes out. After a wetting agent cartridge has been expended, the extinguishing procedure can be continued as normal with the wetting agent holder still inserted but now using plain water, i.e. the extinguishing process does not need to be interrupted for this reason.

The wetting agent holder will always be retained in the nozzle by the water flow and can be reused as often as desired. Before inserting the cartridge in the nozzle check for damages! The wetting agent cartridge has no expiry date.

- FIRE-EX TURBO 1000 cartridge insert - simple, quick to insert into the inlet of a Turbo nozzle, it's ready to go
- optimises the wetting and penetration capabilities of the extinguishing water
- non-toxic, environmentally neutral and biodegradable - according to regulation (EG) Nr. 1907/2006
- free of fluorinated surfactants
- this system enhances fire brigades' foaming concepts
- no mixer required and it is no longer necessary to carry foaming agent canisters along
- no additional fittings required for installing the wetting agent cartridge

content: 20 cartridges

weight: 0.12 kg

Cartridge adapter not included in delivery.
