

FIRE-EX Cardridge Adapter 1000 D-D, Storz D-coupling

Order number: LT-01059

In connection with the FIRE-EX wetting agent cartridge, the FIRE-EX 1000 wetting agent cartridge enables the production of wetting agent, regardless of the flow rate.

For this purpose, the FIRE-EX 1000 wetting agent cartridge is coupled into the hose line; the wetting agent is added by flowing water around the wetting agent cartridge. This admixture reduces the surface tension of the water, which makes it easier for the extinguishing water to penetrate the fire and thus increases the extinguishing effect. The result is a higher efficiency of the amount of extinguishing water available.

- easy installation in the hose line possible
- volume flow-independent admixture of wetting agents

dosing rate: approx. 0.02%

max. working pressure: 16 bar

inlet / outlet: Storz D-25

material: aluminum

dimensions: 199 x 59 x 59 mm

weight: 0.5 kg
