

rescue-tec Quick Response Bag de Vries, for 30 m D-hose (Ø 25 mm)

Order number: LT-01200

The quick response bag fills a gap in fire fighting tactics. It allows the emergency squad to operate fast, effectively and water-efficiently. With the combination of a special nozzle and the specific method for laying the hose the first extinguishing attack can be performed quickly and simply!

Advantages:

- the hands are free, because the bag is carried over the shoulder
- it contains a 30 m hose (Ø 25mm), which is inserted in a special way
- the hose runs easily
- flap at the bottom can be opened, thus the remaining hose falls out and can be laid out

Studies showed that in case of apartment or vehicle fires the handy hose (Ø 25 mm) is completely sufficient to ensure an adequate water supply and a good fogging, provided the suitable nozzle is used.

The bag attached on the outside can accommodate a C/D adapter piece so that the hose can be connected to the usual distributors.

The quick response bag optimizes your operations.

material: Cordura 1000D

dimensions: 49 x 51 x 6 cm

weight: 1.14 kg

This bag could be printed individual. More you will find [there](#).
