

GH Hose pack carrying system EVO 2

Order number: LT-01251

The GH hose package carrying system is very easy to use and therefore also very practical for transporting hose packages. It is attached using eyelets, cable ties and Velcro straps. This means that each individual strap can be individually adjusted to the size. The cable ties eliminate the need for manual opening before applying pressure to the hose.

- is blown open at approx. 4-5 bar, no manual opening necessary
- comfortable rubber grip
- Each individual strap can be individually adjusted
- quickly fixed with cable ties
- suitable for all commercially available fire hoses

Supplied with:
10 metal eyelets

strap width: 50 mm
handle width: 130 mm
weight: 740 g

The new GH HOSE PACKAGE CARRYING SYSTEM is even easier to use and therefore very practical for transporting hose packages. What is new are the individual eyelets that must first be attached to the loops of the Velcro strap. In the new system, the two eyelets are now connected with a disposable cable tie. This eliminates the need to manually open the Velcro straps before applying pressure to the hose. The carrying system can be blown open immediately (the cable ties are blown at approx. 4-5 bar). The Velcro straps allow each individual strap to be individually adjusted to the size. (Such as shut-off device, hollow jet pipe, C 42 hoses up to 60m). The eyelets can also be ordered separately as a set of 5 if you still want to use the existing GH hose package carrying system. For calf ties, our recommendation would be a material thickness (width) of 3.5 - 4.0 mm. We would also ask for your understanding that when using cable ties with a material thickness (width) of over 4 mm, we cannot accept any liability for damage caused to the system.
