

## Hose Wrap Board

**Order number:** LT-01280

Hose packages are a relief for every team in inside attacks. In case of a fire laying out hose reserves is always a lost of precious time. A good solution is the hose package: hollow stream nozzle and C-hose are bundled to hose packages and carried ready to use in the vehicle.

### Advantages:

The package can be transported over the shoulder, both hands are free.

In front of the operation scene the coil remains filled with water and winds up independent during the team advances. Also is it possible to lean the loop at the wall and to track it over stairs and in small corridors.

### Disadvantages:

If the loops are winded by hand, they can be different in length, quality and form. Heightened risk of injury because of stumble or hitting couplings is the consequences.

2 people are needed

To wind by hand is very time-consuming

The hose wrap board is the solution for these problems, because its advantages are:

- a hose package is winded in only one minute
- only one person is needed
- a optimized, always the same hose package length and position
- hose material protection

length: 170 cm

width: 20 cm

strength: 2.2 cm

weight: 5.9 kg
