

Portable Smoke Stopper RSS S80-140, for self-help, with bag

Order number: LT-01530

Smoke stopper for stationary provision

The portable smoke blocker prevents the spread of smoke and heat in not affected areas of burning buildings. After installation of the portable smoke blocker the door to the affected area can be opened and be used for escape or the evacuation of residents or patients without the spread of smoke and heat in the building.

The portable smoke blocker can be fast installed into a door or entrance opening by four easy steps.

Advanteages:

- suitable for door widths of 80 up to 140 cm
- prevents smoke and heat spread
- keeps escape routes smoke-free
- easy and fast installation

Matched to the requirement of hospitals, old people's and care homes.

supplied with:
transport bag

dimensions: 830 x 540 x 40 mm
