- dust precipitation on access roads and collection points
- irrigation of green areas, agricultural land, etc.
- sprinkler head replaceable

2 B couplings, full passage

height of sprinkler head: 1.20 m

pitch circle limiter: 0°-350°

circular sprinkler connection: 1 ¼"

weight: 7 kg

supplied with:

3 nozzle inserts 6, 8 and 10 mm for changing

The circular sprinkler-B was designed to keep areas that have already been extinguished wet or to fight fires if burning areas cannot be accessed due to a source of danger (e.g. ammunition residue). And this works day and night, because the Kreisregner-B can be operated without the commitment of emergency services. Partial circle limiters, three different nozzle attachments and a shut-off valve with which individual sprinklers can be switched on or off during operation ensure conscious, economical use of the scarce resource of extinguishing water.
