

BIG High Performance Fan HP18-H2 Black Edition, combustion engine, power 4,3 kW

Order number: LT-06400

High-performance fans with combustion engine are powerful and create a high air output, they are quickly ready to use and operate stand-alone. There is no electrical power supply or water supply necessary, making them optimal as first ventilation tool in the attack.

The High-Perfromance Fans with the high-pressure concept are specially designed for a more compacted air-stream and for an ideal pressure build-up inside the building. The improved inflow and novel deflectors allow an optimized air flow and less power loss. A much higher efficiency is reached by the changed impeller design. The extended inclination range provides an optimum approaching flow of the ventilation opening.

The smallest possible compartment space is necessary because of optimized dimensions. An innovative material mix results in a lower total weight.

• impressive power
• excellent ergonomics
• outstanding quality
• compact dimensions

type: HP18-H200-B1
drive: combustion engine
power: 4,3 kW
air output effective: 59.000 m³/h
engine: Honda GX200
tilt angle: +20° / -20°
dimensions: 51 x 55 x 48 cm
weight: 30 kg
