

## Söhngen LifePad-Box, First aid product

**Order number:** RD-01001

The LifePad is an aid product for first responders in cardiac arrest and is intended to motivate more people to provide first aid. The step-by-step instructions help you to keep a cool head. The coloured LEDs give you visual feedback for the optimal compression pressure. An acoustic signal tells you the optimal compression rate of 100 beats per minute. Due to the flexible material, the LifePad adapts to any body shape and can be used on people aged 12 and over. The support surface shows the exact positioning of the hands for resuscitation. The LifePad can also be used in combination with a defibrillator (switch off the signal tone for this).

Included in delivery:

1 x LifePad

1x SÖHNGEN resuscitation towel

1x glove set with 4 pieces vinyl large

1x Clothes scissors
