

## Necklite, Immobilization Collar

**Order number:** RD-01011

As a cervical spine support collar, the Necklite is used for prophylactic care in the event of suspected cervical spine injuries. The Necklite splint made of a flexible aluminum foam composite offers a secure hold and relief in the cervical spine area. The 55 cm long and 18 cm high rail can be folded or rolled up to save space and can therefore be stowed anywhere. This makes it ideal for compact emergency equipment for emergency services.

Necklite is engineered for mission conditions. The gray color does not stand out against clothing. The aluminum core covered with PU foam offers high stability and flexibility at the same time. The movable chin rest optimally adapts to the shape of the patient's chin. This makes the installation easier. Thanks to a Velcro fastener, the Necklite can be fixed quickly and individually. Trachea and drainage openings as well as the X-ray transparent material allow the patient to be treated immediately in rescue centers or hospitals.

- especially suitable for tactical forces
- foldable and rollable for small packing size
- material thickness: 5mm
- highly flexible and stable at the same time
- partially movable chin rest
- with trachea and drainage opening
- practical, individually adjustable Velcro fastener
- radiolucent

material: aluminum foam composite

dimensions: 55 x 18 x 0.5 cm

weight: 105 g
